

Composite Ninja

The Versatile Placement, Shaping And Carving Instrument

The ergonomic **Composite Ninja** has been designed to perform the tasks of several composite instruments, all in one.

- Angulated, sharp, two-sided blade allows for easy access on interproximal and facial surfaces.
- Designed for adapting and shaping of composite prior to curing and trimming flash after curing.
- Multi-angled blade enables the tapering of the composite interproximally while establishing line angles and blending the material into the natural tooth.
- Sharp blade accurately and efficiently removes composite flash.

Posterior Removal of Cured Composite Flash

“Every day. Every case. If there is one instrument that I use for virtually all of my anterior and posterior restoration cases, it is Composite Ninja.”

- Devin McClintock, DDS
